#### DETAILED ACTION

### Response to Arguments

1. Applicant's arguments, see pages 7-12 and the attachment, filed 5/10/2004, with respect to the rejection(s) of claim(s) 1, 4, and 6-17 under 35 USC 102(b) as being anticipated by Gerhart and Robinson have been fully considered and are persuasive. Therefore, the rejections have been withdrawn. However, upon further consideration, new ground(s) of rejection are being made in view of the newly applied references herein.

### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, 4 and 7-17 are rejected under 35 U.S.C. 102(b) as being anticipated by USP 5,370,865 to Yamagishi et al. (herein referred to as "Yamagishi").
- 4. Yamagishi teaches a composition comprising basic amino acids arginine or lysine in amounts of at least 1% of the composition; water-soluble polymers methyl cellulose, hydroxyethylcellulose in amounts greater than .8% of the composition; and a carrier comprising water. See col. 3, lines 7-13; col. 4, lines 10-12; Examples 7, 8 and 9. The composition may additionally comprise polymers such as polyvinyl alcohol or polyoxyethylene-polyoxypropylene block copolymers (col. 4, line 34). The composition may further comprise an anionic surfactant such as polyethylene glycol.

Application/Control Number: 09/697,374

Art Unit: 1743

It is noted that the instant claims recite that the composition be "capable of exhibiting a detectable and measurable color transition in response to a concentration of dialdehyde" however, the claimed composition is limited to components a, b and c and does not require the presence of the dialdehyde. Therefore, as previously pointed out by Applicant in the response filed 4/17/2003, the color response is made *in situ* when combined with the dialdehyde. Since there is no dialdehyde present in the instant composition, there is no color present. Moreover, it is the Examiner's position that the since the compounds of Yamagishi are the same as those instantly claimed, the composition as claimed by Yamagishi would inherently possess the ability to react colorimetrically to the presence of dialdehyde.

With regard to and in anticipation of Applicant's argument that the Yamagishi reference is not directed to the same intended use, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art.

See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963). If Applicant intent is to patentably protect and focus on the intended use of the composition, perhaps method claims are more suitable.

Art Unit: 1743

## Allowable Subject Matter

- 5. Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. The following is a statement of reasons for the indication of allowable subject matter: the prior art does not teach or suggest a composition such as instantly claimed wherein the diamino carboxylic acid is present an amount of about 5-15%.

#### Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. USP 4,937,234 teaches relevant compositions such as those in Examples 8, 10 and 12.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Monique T. Cole whose telephone number is 571-272-1255. The examiner can normally be reached on Monday-Thursday from 6:30 A.M. to 4:00 P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 571-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
